

DATA PROTECTION

Commvault Backup & Recovery

Plan backup and recovery for on-premises, cloud and SaaS workloads.

UNDERSTAND THE PRODUCT

Commvault provides backup and recovery for supported on-premises and cloud workloads, with backup coverage for supported SaaS applications including Microsoft 365. Check each workload against the supported-workload list. [1]

1

Business workloads

Backup and recovery for supported on-premises and cloud workloads. Check exact application versions and restore methods. [1]

2

SaaS application data

Coverage for supported SaaS applications, including Microsoft 365. Confirm application-level restore needs. [1]

3

Recovery, not just backup

A completed backup is not a completed recovery test. Define acceptable data loss and downtime per application.

PLATFORM AND PURCHASE CONSIDERATIONS

Include storage, permissions, isolated recovery access and the operational work to maintain the design. Confirm workloads, retention, backup windows and target recovery times in the proposal.

HOW IT WORKS - SIMPLIFIED

Protected workloads are backed up to the storage you choose; recovery uses the stored copies. Your recovery targets and regular restore tests determine whether the design works. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and sizing

Discuss workloads and versions, data volumes and growth, retention, backup windows and recovery targets.

02 Licensing and quotation

Request protected capacity or workload/user metrics, retention and storage location as explicit line items.

03 Deployment planning

Ask about infrastructure, migration from current backup, testing and who performs each task.

04 Recovery and renewals

Agree restore-test schedule, support escalation and renewal dates.

BUDGET DRIVERS

Protected capacity, workload or user metrics, retention, storage location and recovery requirements, plus deployment infrastructure and testing effort. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Run restore tests for priority applications and compare results with your agreed recovery time and data-loss targets.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
