

ENDPOINT SECURITY

CrowdStrike Endpoint Security

Evaluate endpoint prevention and investigation capabilities on the Falcon platform.

UNDERSTAND THE PRODUCT

CrowdStrike endpoint security includes Falcon Prevent for next-generation antivirus and Falcon Insight XDR for endpoint detection and response. Insight XDR monitors endpoint activity and analyses it to identify threats, supporting investigation and response. These are distinct capabilities within the Falcon portfolio. [1, 2]

1

Falcon Prevent

The prevention offering provides next-generation antivirus for endpoints. Use the proposed package and its platform requirements to establish the exact coverage you are buying. [1]

2

Falcon Insight XDR

Continuous endpoint-activity monitoring and analysis help identify threat activity. Investigators can use endpoint visibility to examine incidents and prioritise response. [2]

3

Module selection

Match prevention and EDR requirements to named modules in the quote. Do not assume identity, cloud, data protection or a managed response service is included.

PLATFORM AND PURCHASE CONSIDERATIONS

Check the supported operating-system versions and sensor requirements for every device group. Confirm modules, telemetry retention, integrations and response ownership. A software subscription should not be treated as an automatically included managed service.

HOW IT WORKS - SIMPLIFIED

Endpoint activity supplies the visibility used by Falcon Insight XDR; analytics identify suspicious behaviour; the security team reviews detections and investigates. Response responsibilities depend on the selected package and any contracted service. [2]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and selection

Discuss prevention, investigation, existing security tools and in-house staffing with ITSIPL to define the required Falcon capabilities.

02 Licensing and quotation

Request named modules, covered devices, contract term and any managed service as explicit line items in the proposal.

03 Deployment planning

Ask about device eligibility checks, pilot deployment, existing-agent migration and integration testing. Agree who performs each task.

04 Support and renewals

Confirm incident ownership, escalation contacts, service hours and renewal arrangements, including separate vendor-delivered services.

BUDGET DRIVERS

Endpoint count, selected Falcon package/modules, subscription term, service scope, integration work and deployment requirements. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Check deployment coverage, endpoint performance, detection context, integration behaviour and the steps your team needs to investigate and contain a test incident.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
