

DATA PROTECTION

Druva Backup & Resilience

Assess cloud-delivered backup against your workloads and recovery needs.

UNDERSTAND THE PRODUCT

Druva offers a SaaS-based backup and resilience platform, with options for supported SaaS applications, endpoint data, and data-centre and public-cloud workloads. Cloud delivery does not remove recovery planning. [1]

1

SaaS and endpoint data

Backup options for supported SaaS applications and endpoint data. Confirm supported workloads. [1]

2

Data centre and cloud

Cloud-delivered protection for supported data-centre and public-cloud workloads. [1]

3

Links and location

Test initial backup and restore transfer times over your actual links, and validate data residency.

PLATFORM AND PURCHASE CONSIDERATIONS

Check retention, consumption assumptions, recovery destinations, administrative access and identity requirements. Ask how data growth and subscription commitments are treated.

HOW IT WORKS - SIMPLIFIED

Supported workloads are protected through a cloud service rather than backup infrastructure you operate. You still define recovery targets and test restores. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and sizing

Discuss SaaS tenants, endpoint counts, workloads, data volumes, bandwidth, preferred regions and retention.

02 Licensing and quotation

Request protected users, workloads or capacity, retention and subscription term as explicit line items.

03 Deployment planning

Ask about onboarding order, initial backup timing, migration from current tools and testing.

04 Recovery and renewals

Agree restore-test schedule, support escalation and renewal dates.

BUDGET DRIVERS

Protected users, workloads or capacity, retention, data growth, subscription commitment and any recovery-related charges. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Time initial backups and test restores over your real links, and confirm data location, access control and recovery results.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
