

DATA LOSS PREVENTION

Forcepoint DLP

Plan policy-based controls for how sensitive data moves out of your business.

UNDERSTAND THE PRODUCT

Forcepoint DLP provides policy-based controls for sensitive data across supported endpoint and network channels. Confirm channel coverage, operating systems and applications for your chosen deployment. [1]

1

Policy-based controls

Policies define what sensitive data is and how it may move. Your team needs a defined policy to start. [1]

2

Endpoint and network

Supported channels include endpoint and network. Confirm the supported applications and systems. [1]

3

Observe before blocking

Start with observation and a controlled pilot. Classification quality affects everyday work.

PLATFORM AND PURCHASE CONSIDERATIONS

Plan ownership for policy tuning, incident review and approved business exceptions. Include policy design, rollout and agreed support scope, plus infrastructure for your deployment model.

HOW IT WORKS - SIMPLIFIED

Policies identify sensitive data; supported channels are monitored against those policies; incidents go to reviewers who tune policies and approve exceptions. Coverage depends on the deployment. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and scoping

Discuss sensitive-data examples (without sending confidential content), leakage channels and your endpoint estate.

02 Licensing and quotation

Request users or endpoints, protected channels, selected components and support as explicit line items.

03 Pilot planning

Ask about an observation-first pilot, policy tuning, rollout phases and exception handling.

04 Operations and renewals

Agree who reviews incidents and tunes policies, and when subscriptions renew.

BUDGET DRIVERS

Users or endpoints, protected channels, selected components, deployment model and infrastructure, policy design, rollout and support. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Review false positives, user impact, incident-review workload and exception handling before moving from monitoring to blocking.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
