

DATA LOSS PREVENTION

Netskope One DLP

Plan data loss prevention across cloud, web, email and endpoint channels.

UNDERSTAND THE PRODUCT

Netskope One DLP provides data loss prevention across supported cloud, web, email and endpoint channels. Check which channels and operating systems your proposed entitlement covers. [1]

1

Channel coverage

Supported channels include cloud, web, email and endpoint. Confirm each channel is in your entitlement. [1]

2

Traffic and devices

Identify required cloud applications, how traffic will be steered and whether devices are managed or unmanaged.

3

Pilot first

Pilot data classifiers with real users. False positives and exception handling affect everyday work.

PLATFORM AND PURCHASE CONSIDERATIONS

Confirm covered channels and operating systems, your identity provider and where users work. Include traffic-steering, identity and policy-rollout effort in the scope.

HOW IT WORKS - SIMPLIFIED

Policies describe the sensitive data to protect; supported channels are assessed against those policies; your team reviews incidents and approves exceptions. Coverage depends on your entitlement. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and scoping

Discuss SaaS applications, sensitive-data types (without sharing confidential content), user locations and endpoint ownership.

02 Licensing and quotation

Request users, channel coverage, selected subscriptions and support as explicit line items.

03 Pilot planning

Ask about a pilot, classifier tuning, traffic steering and how exceptions will be approved.

04 Operations and renewals

Agree who tunes policies, who reviews incidents and when subscriptions renew.

BUDGET DRIVERS

Users, channel coverage, selected subscriptions, traffic-steering and identity work, and support. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Measure false positives, latency, exception handling and incident-review time with real users before broad enforcement.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
