

SECURE ACCESS

Netskope One Private Access

Connect users to private applications with deliberate, policy-based access.

UNDERSTAND THE PRODUCT

Netskope One Private Access provides zero trust network access to private applications. Define which users need which internal applications, then confirm identity, location and device requirements. [1]

1

Private applications

List the internal applications users need so access can be scoped to them. [1]

2

Identity and users

Confirm your identity provider, user groups and where users connect from.

3

Pilot and latency

Pilot with real users. Latency and exception handling matter in daily use.

PLATFORM AND PURCHASE CONSIDERATIONS

Include identity integration, the private-application list, user locations and device ownership in the scope. Confirm the subscription, support and any other components in the proposal.

HOW IT WORKS - SIMPLIFIED

Users connect to the service, identity and policy decide which private applications they can reach, and activity can be reviewed. Exact capabilities depend on configuration and licensing. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and scoping

Discuss the private application list, user locations, endpoint ownership and your identity provider.

02 Licensing and quotation

Request users, application-access scope, subscriptions and support as explicit line items.

03 Pilot planning

Ask about a pilot group, application onboarding order, identity setup and rollback.

04 Operations and renewals

Agree who maintains access policies and handles exceptions, plus renewal dates.

BUDGET DRIVERS

Users, application-access scope, selected subscriptions, identity and rollout effort, and support. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Test sign-in, access to each critical private application, latency from real locations and exception handling.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
