

SECURE ACCESS

Palo Alto Networks Prisma Access

Evaluate cloud-delivered security for remote networks and mobile users.

UNDERSTAND THE PRODUCT

Prisma Access from Palo Alto Networks is cloud-delivered security for remote networks and mobile users. It is an option when the requirement is distributed access rather than an appliance at every location. [1]

1

Remote networks

Cloud-delivered security can be considered for branches and remote sites instead of placing an appliance at each one. [1]

2

Mobile users

Designed for people who connect from outside the office. Define who needs access to which applications. [1]

3

Design inputs

Document routing, identity-provider integration, encrypted traffic and logging before choosing a design.

PLATFORM AND PURCHASE CONSIDERATIONS

Validate latency and application behaviour from actual user locations. Check the security subscriptions, management components and log retention you need; do not assume every capability is in the base purchase.

HOW IT WORKS - SIMPLIFIED

Users and remote sites connect to the cloud service, and the configured security policy applies to their traffic. Routing, identity and logging requirements shape the design. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and scoping

Discuss your network diagram, site and remote-user counts, application locations and identity platform with ITSIPL.

02 Licensing and quotation

Request users, sites, capacity and the applicable subscription metric as explicit line items.

03 Pilot planning

Ask about a pilot from real user locations, routing changes, identity integration and rollback.

04 Support and renewals

Agree who administers policy, the support escalation route and renewal dates.

BUDGET DRIVERS

Remote users, sites, capacity, the subscription metric, management and logging needs, and integration work. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Test latency and access to key applications from real user locations, identity sign-in behaviour, logging and rollback readiness.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
