

ENDPOINT SECURITY

Sophos Endpoint

Protect employee computers and plan the right level of detection and response for your business.

UNDERSTAND THE PRODUCT

Sophos Endpoint combines malware prevention, ransomware protection and endpoint controls. Its published specifications list CryptoGuard, deep-learning malware prevention, anti-exploitation, web control, application control and peripheral control. Feature availability differs by operating system. [1]

1

Threat prevention

CryptoGuard provides ransomware file protection. Deep learning, malware scanning and exploit mitigation add protection layers; availability varies by platform. [1]

2

Device and data controls

Web, application and peripheral controls enforce device policies. Endpoint DLP is listed on Windows; full-disk encryption is an add-on. [1]

3

Detection and response

EDR supports investigation and response. XDR adds wider visibility. MDR is an expert-led service option. Confirm the subscription and included capabilities. [1]

PLATFORM AND PURCHASE CONSIDERATIONS

Windows and macOS endpoint requirements should be checked against the current matrix. Windows Server and Linux require a workload-protection subscription; mobile protection and legacy-platform coverage are separate considerations. [1]

HOW IT WORKS - SIMPLIFIED

Configure policies for the device group; endpoint protection evaluates files and activity; prevention and control features apply those policies. Select EDR/XDR or MDR when your response requirements extend beyond the endpoint package. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and selection

Discuss device counts, operating systems, existing antivirus and response staffing with ITSIPL before selecting Endpoint, EDR, XDR or MDR.

02 Licensing and quotation

Request an itemised proposal identifying endpoint licences, separate server/mobile needs, term, add-ons and renewal dates.

03 Deployment planning

Ask about a pilot, application compatibility, migration sequencing, policy setup and administrator handover. Confirm the delivery owner.

04 Support and renewals

Agree the support contact, vendor escalation route, response coverage and renewal process. Confirm any managed service separately.

BUDGET DRIVERS

Device scope, subscription level, contract term, separate workload/mobile needs, migration effort and agreed support scope. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Measure deployment success, device performance, alert quality, application compatibility and the time required to investigate a test alert.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
