

NETWORK SECURITY

Sophos Firewall

Plan network protection for your offices, virtual and cloud environments.

UNDERSTAND THE PRODUCT

Sophos Firewall provides network security in hardware, virtual and cloud deployment options. Match the deployment type, model and security subscriptions to your own sites and traffic. [1]

1

Deployment options

Hardware, virtual and cloud options let you match the firewall to a physical site or a virtual environment. [1]

2

Inspected traffic

Size the design for traffic with the security features you plan to enable, not raw throughput alone. [1]

3

Subscriptions and support

Confirm which security subscriptions, management and support are included before comparing quotes.

PLATFORM AND PURCHASE CONSIDERATIONS

Measure traffic with inspection enabled, and include resilience needs for each site. Confirm what each bundle includes. Sophos also offers endpoint security; scope firewall and endpoint requirements as separate line items.

HOW IT WORKS - SIMPLIFIED

Traffic reaches the firewall and is handled under the policies and security features you enable. Real-world performance depends on the model, the traffic mix and the enabled features. [1]

Capabilities depend on configuration and licensing. Official sources on page 2.

YOUR ITSIPL PURCHASE DISCUSSION

From product to solution.

Define the right product, budget and delivery responsibilities with ITSIPL.

01 Requirements and sizing

Discuss sites, internet bandwidth, current firewall model, user numbers and availability targets with ITSIPL.

02 Licensing and quotation

Request the appliance or virtual option, security subscriptions, support and any resilience components separately.

03 Deployment planning

Ask about policy migration, configuration, change windows, testing and rollback. Confirm who does each task.

04 Operations and renewals

Agree configuration ownership, support escalation and subscription renewal dates in the delivery scope.

BUDGET DRIVERS

Appliance, virtual or cloud choice, inspected traffic, resilience design, security subscriptions, support and migration scope. Request an itemised quote separating licences, one-time work and recurring services.

VALIDATE BEFORE ROLLOUT

Validate business-application access, performance with the intended security features enabled, failover where required and rollback readiness.

CLEAR RESPONSIBILITIES, NO SURPRISES

Use your ITSIPL proposal to document licences, services, delivery owner (ITSIPL, vendor or another provider), acceptance criteria and support terms. The discussion areas above are not a promise that every service is included. Confirm your final scope before ordering.

Let's discuss your requirements.
